TECHNICAL SNAPSHOT

SELL ALUMINIUM JUN @ 237 SL 240 TGT 234-232. MCX

OBSERVATIONS

Aluminium trading range for the day is 231.7-238.5.

Aluminium settled flat amid stronger-than-expected U.S. employment data.

China's trade data showed better-than-expected exports, suggesting factory owners were managing to find buyers overseas.

Global primary aluminium output in April rose 3.3% year on year to 5.898 million tonnes

TECHNICAL SNAPSHOT

SELL COPPER JUN @ 865 SL 870 TGT 860-850. MCX

OBSERVATIONS

Copper trading range for the day is 844.9-874.3.

Copper bounced from lows as the focus shifted to demand potential after a sell-off.

Surveys of purchasing managers in China show factory activity picking up, particularly at smaller companies.

SHFE stocks have reached four-year highs of 336,964 tons, compared with about 30,000 tons in January

News you can Use

Japan's economy contracted less than initially reported in January-March on upward revisions to capital spending and inventory data, lending modest support to the central bank's plans to raise interest rates again this year. Analysts expect the Japanese economy to have bottomed out in the first three months of the year, although a stubbornly weak yen and disruptions at major automaker plants continue to cloud the outlook for the current quarter. Japan's GDP shrank a revised 1.8% annualised in the first quarter from the previous three months, Cabinet Office data showed, a smaller decline than economists' median forecast for a 1.9% contraction and a 2.0% decline in the preliminary estimate. The revised figure translates into a quarter-on-quarter contraction of 0.5% in price-adjusted terms, unchanged from the initial reading issued last month. The revised GDP data comes on speculation the BOJ may discuss cuts in its Japanese government bond (JGB) purchases at its policy review this week as part of efforts to unwind monetary stimulus to curb yen weakening. Investors are looking for clues on the timing of further rate hikes by the central bank, which raised rates in March for the first time since 2007 in a landmark shift away from ultra-loose monetary policy.

The Federal Reserve is far less likely to start cutting interest rates as soon as September, traders bet, after a U.S. government report showed employers created many more jobs and paid higher wages last month than expected. Nonfarm payrolls rose 272,000 in May, compared with the 185,000 expected, and average hourly earnings rose 4.1% from a year ago, outpacing the 3.9% rise that economists had anticipated. March wage data was also upwardly revised to show hourly earnings gained 4%, instead of the earlier reported 3.9%. After the report, futures contracts that settle to the Fed's policy rate now imply a 53% chance of a rate cut from the current 5.25%-5.5% range by September, compared with about a 70% chance seen before the report. U.S. central bankers have said they plan to wait on rate cuts until they are more confident that inflation is declining toward their 2% goal; if anything, Friday's wage data suggests pressures are pushing prices the other way. Although the unemployment rate unexpectedly crept up to 4%, from 3.9% previously, the outsized increase in job creation defied expectations that the labor market is cooling in a way that could aid the Fed's fight against inflation.
