TECHNICAL SNAPSHOT

SELL ALUMINIUM APR @ 225 SL 227 TGT 222-220. MCX

OBSERVATIONS

Aluminium trading range for the day is 221.1-226.5.

Aluminium dropped on profit booking after support seen as Japanese buyers paying higher premiums.

Support also seen amid stronger-than-expected economic data from China

U.S. manufacturing expanded for the first time in 1-1/2 years in March.

News you can Use

ECB officials acknowledged that the case for considering interest rate cuts was gaining strength as inflation is expected to continue its downward trend in the coming months, while it was wise to await incoming data and evidence before committing to such actions, the minutes from the most recent ECB meeting showed. ECB officials welcomed the updated staff projections indicating that inflation was poised to decline towards the 2% target sooner than previously expected, primarily due to declines in energy prices. However, they remained cautious about domestic price pressures, citing concerns stemming from robust wage growth, declining labor productivity, and persistent services inflation. Consequently, they emphasized that the disinflationary process remained delicate and contingent upon several favorable assumptions regarding wages, profits, and productivity, and that they would have substantially more data and insights by the June meeting.

U.S. employers hired far more workers than expected March while raising wages, suggesting the economy ended the first quarter on solid ground and potentially delaying anticipated interest rate cuts from the Federal Reserve this year. Nonfarm payrolls increased by 303,000 jobs last month, the Labor Department's Bureau of Labor Statistics said in its closely watched employment report on Friday. Data for February was revised slightly lower to show 270,000 jobs added instead of 275,000 as previously reported. The economy is outshining its global peers, despite 525 basis points worth of rate hikes from the U.S. central bank since March 2022 to quell inflation. Economists say most businesses locked in lower borrowing costs prior to the Fed's tightening cycle, providing some insulation from higher rates and allowing them to keep their workers. Household balance sheets are mostly healthy, helping to support consumer spending. The labor market has also benefited from a rise in immigration over the past year. Easing financial conditions are boosting hiring in interest rate-sensitive industries like construction, which should provide a base for job growth even as payroll gains are expected to slow.
