News you can Use

The HCOB Flash Germany Manufacturing PMI increased to 42.2 in April 2024 from 41.9 in March, slightly below forecasts of 42.8. The reading continues to point to a sharp deterioration in manufacturing business conditions, with incoming orders falling the most in five months and quicker delivery times serving as further evidence of weakening demand. On the other hand, production fell at a slower pace, job shedding eased, factory gate prices fell the most since September 2009 and optimism with respect to future output improved. The HCOB Germany Services PMI rose to 53.3 in April 2024, surpassing market expectations of 50.6 and compared to 50.1 in the preceding month, a preliminary estimate showed. The HCOB Germany Composite PMI rose to 50.5 in April 2024 from 47.7 in the previous month, easily beating market expectations of 48.6, a preliminary estimate showed. The latest reading was above the 50.0 no-change threshold for the first time since June 2023, signaling a modest rate of expansion in private sector business activity, led by a sharp rebound in service sector output. However, manufacturing production continued to contract, although at a slower pace.

The HCOB France Services PMI rose to 50.5 in April 2024 from 48.3 in the previous month, compared to market estimates of 48.9, preliminary estimates showed. The latest reading pointed to the first expansion in services activity since May 2023. The services sector saw an increase in demand for the first time since April 2023, resulting in a slower decline in backlogs of work compared to the previous month. The S&P Global France Manufacturing PMI fell to 44.9 in April 2024, down from 46.2 in the previous month and coming worse than market expectations of 46.9, preliminary estimates showed. It marked the 15th consecutive period of contraction in France's factory activity and the steepest in three months, as new orders dropped to its sharpest pace since January amid reports of deteriorating demand from clients in overseas markets. At the same time, there was an accelerated decline in manufacturing output, and employment also continued to fall. On prices, input costs inflation rose to its highest level since February 2023, driven by higher prices of metal and oil-based products.
