News you can Use

Profits at China's industrial firms grew at a solid, though slower, pace as resilient exports helped cushion sluggish domestic demand, highlighting the economy's uneven recovery despite policymakers' efforts to spur consumption. Exports and industrial production have done much of the heavy lifting for the world's second-largest economy. Persistent weakness in consumption and the property sector, however, helped drag second-quarter growth to its slowest pace in more than three years, keeping calls alive for further policy support to address economic imbalances. Industrial profit growth eased to 15.1% in June from 21.1% in May, while first-half profits rose 18.7% from a year earlier, compared with an 18.8% increase in the January-to-May period, data from the National Bureau of Statistics (NBS) showed.

Euro zone business activity returned to growth in July for the first time in four months, driven by a rebound in new orders, but may be derailed by high inflation and renewed conflict in the Middle East, a survey showed. The S&P Global Flash Euro zone Composite PMI Output Index rose to 51.9 in July from June's 50.0, its highest reading in five months and far above an expectation in a Reuters poll for a modest rise to 50.3. Both manufacturing and services contributed to the output rebound. Services recovered to a five-month high of 51.6, up from 49.4, snapping three months of contraction and confounding the Reuters poll for another month of declining activity. Manufacturing output growth hit a 52-month high and the headline factory PMI rose to 52.0 from 51.4, above the poll estimate for 51.5.
