

MARKET NEWS/UPDATES

- Farmers in Maharashtra have sown rabi crops over 192,938 hectares as of Tuesday, down 41.5% from 329,971 hectares sown in the corresponding period last year, according to a report released by the state government's agriculture department. The normal rabi acreage for the period, which is an average of five years, from 2016 to 2021, is 5.4 million hectares. The area sown under wheat so far was 930 hectares, up from 384 hectares sown in the same period last year, the report showed. The acreage under maize has also risen to 28,047 hectares from 24,433 hectares a year ago. The acreage under jowar is down to 155,676 hectares from 292,174 hectares. The acreage under pulses was 7,964 hectares, down from 12,330 hectares last year, according to the data. The area sown under bengal gram, or desi chana, fell to 7,678 hectares from 12,215 hectares a year ago. Chana is one of the major rabi crops grown in Maharashtra. The area sown under oilseeds as of Tuesday fell to 275 hectares from 634 hectares last year, the report said. The acreage under safflower was 187 hectares, down from 590 hectares a year ago. The acreage under sunflower was 46 hectares, up from 17 hectares last year. The water level in dams across Maharashtra is 88.3% of the live storage capacity as of Friday, compared with 74.1% a year ago, according to data from the state water resources department.
- The country got an average rainfall of 18.4 mm in the week ended Wednesday, 23% above the normal rainfall of 15.0 mm for the period, the India Meteorological Department said. Two out of four homogeneous regions in the country received above-normal showers during the week, the weather bureau said. Central India received 97% above-normal showers during the week at 18.6 mm. Subdivisions such as west Madhya Pradesh, the Gujarat region, Saurashtra and Kutch, Konkan and Goa, central Maharashtra, Marathwada, and Vidarbha recorded large excess rainfall due to heavy rains in these regions. The South peninsula recorded 51.7 mm rain, 56% higher than the normal rainfall for the period, the data showed. Rainfall in northwest India recorded a 79% deficit during the week at 1.0 mm. Similarly, east and northeast India received 54% below-normal rainfall at 10.7 mm during the week, the agency said. Of the 36 subdivisions in the country, rainfall was "normal" in five and "excess" in one during the week. Rainfall was "large excess" in 12 subdivisions, while it was "deficient" in eight. The rainfall was "large deficient" in nine subdivisions. One subdivision received no rain during the week. Since Oct. 1, India has received 65.2 mm of rainfall, 3% above the normal level of 63.2 mm for the period.
- The Cotton Association of India has estimated the country's cotton production in 2024-25 (Oct-Sept) at 30.2 million bales (1 bale = 170 kg), down 7.1% on year. The committee, however, said there could be a variation of 5% in the cotton pressings and balance sheet numbers on account of an unpredictable monsoon pattern and other factors influencing the crop, according to the release. Cotton production in the north zone, which comprises Punjab, Haryana, and Rajasthan, is pegged at 3.6 million bales in the 2024-25 (Oct-Sept) season. Output in the central zone, which includes Gujarat, Maharashtra, and Madhya Pradesh, is seen at 18.9 million bales in 2024-25 against 20.0 million bales the previous year, according to the Cotton Association of India. Production in the south zone comprising Telangana, Andhra Pradesh, Karnataka, and Tamil Nadu is seen at 7.2 million bales against 7.4 million bales during the previous season, and other states will account for the rest of the output. The association has estimated domestic demand in 2024-25 at 31.3 million bales, the same as the previous year. It has pegged exports at 1.8 million bales, against the previous estimate of 2.85 million bales. The cotton body sees 2024-25 closing stock at 2.64 million bales against 3.02 million bales a year ago. The opening stock for the season starting October is estimated at 3.02 million bales against 2.89 million bales a year ago, the association said. The total supply of cotton till the end of the cotton season 2024-25 is estimated at 35.7 mln bales, against 37.2 million bales in the previous season. The association has estimated imports in 2024-25 at 2.5 million bales, up from 1.75 million bales from its previous estimate.
- Production of groundnut in Gujarat is likely to rise nearly 26% on year to 4.2 million tonnes in 2024-25 (Jul-Jun) even as the acreage under the crop has risen just 0.2% to 1.91 million hectares, according to crop survey by the Solvent Extractors' Association of India. Gujarat is the top producer of the commodity in the country. The significant rise in production will largely be on account of an increased productivity, rising to 2,210 kilogram per hectare from 2,045 kilogram per hectare last year, it said. Across India, groundnut Kharif acreage was reported across nearly 4.9 million hectares as on Sept. 27, compared with 4.37 million hectares last year at the same time, the report said. Owing to scattered showers in certain districts of Gujarat, crops that were sown early have been damaged. During the past three days, several parts of Saurashtra have received heavy showers which may further damage the crop that has been harvested and lying in the field and this is likely to delay the arrivals, according to the report. The mandi prices of good quality groundnut are currently quoted at INR 6,250 per 100 kg, down from the minimum selling price of INR 6,783 per 100 kg. Additionally, soybean acreage in Gujarat increased to 308,000 hectares from 267,000 hectares last year. Farmers' interest in soybean crop has been growing due to low input cost, less labour-dependence and higher mechanization during harvesting. In view of this, soybean area has also been expanding year on year in Gujarat, the report said.

TECHNICAL VIEW

Commodity	Analysis	Signal	Technical Chart
JEERA NCDEX NOV	Even as there prevails a weak bias, pullbacks to 24800/25100 ranges may not be ruled out. Trading signals is prepared based on statistical analysis and is purely on technical indicators like exponential moving averages (EMAs), Relative strength Index (RSI) and stochastic, putting altogether provides an idea about intraday, short, medium and long term trend of the commodities. It also signals the risk of an investment in both agricultural and global commodities as well. Based on all listed indicators above, investors were able to fix a daily, near-term and long term trends. However, must be cautious especially for real-time intraday traders/jobbers.

Trading Strategy based on EMA

Trading strategies mentioned in the report is mainly based on 3, 5, 13, 22, 45 & 60 days exponential Moving Averages. 3 and 5 day EMA has taken for developing Intraday trading strategy, 13 days and 22 days EMA for Short term and Medium term, while 45,60 days EMA for Long term. Here, we use EMAs for POSITIVE and NEGATIVE signals. POSITIVE signal is formed when a short-term moving average (eg: 30 day) crosses from below a longer-term average (eg: 60 day), which is considered bullish. Likewise, NEGATIVE signal is formed when a short-term moving average (eg: 30 day) crosses from above a longer-term moving average (eg: 60 day), which is considered bearish.
