## News you can Use

China's factory output sped up in the January-February period and beat expectations, marking a solid start for 2024 and offering tentative relief to policymakers who are seeking to shore up faltering economic growth. Industrial output rose 7.0% in the first two months of the year, data released by the National Bureau of Statistics (NBS) showed, above expectations for a 5.0% increase and faster than the 6.8% growth seen in December. It also marked the quickest growth in almost two years. Retail sales, a gauge of consumption, rose 5.5%, slowing from a 7.4% increase in December. Analysts had expected retail sales to grow 5.2%. The eight-day Lunar New Year holiday in February saw a solid return of travel, which supported revenue of tourism and hospitality sectors. Fixed asset investment expanded 4.2% in the first two months of 2024 from the same period a year earlier, versus expectations for a 3.2% rise. It grew 3.0% in the whole of 2023. Together with better-than-expected trade data and consumer inflation, indicators will provide some temporary encouragement for policymakers as they try to shore up growth in the world's second-largest economy to keep it on track for an expansion of around 5% this year.

Preliminary data released by the University of Michigan unexpectedly showed a slight deterioration in U.S. consumer sentiment in the month of March. The report said the consumer sentiment index edged down to 76.5 in March after falling to 76.9 in February. The slight decrease by the headline index partly reflected a modest deterioration in consumer expectations, as the index of consumer expectations slipped to 74.6 in March from 75.2 in February. Meanwhile, the report said the current economic conditions index came in at 79.4 in March, unchanged from the previous month. Year-ahead and long-run inflation expectations also remained unchanged from the previous month at 3.0 percent and 2.9 percent, respectively. With manufacturing and mining output recovering from weather-related declines in January, the Federal Reserve released a report showing a slight increase in U.S. industrial production in the month of February. The Fed said industrial production inched up by 0.1 percent in February after falling by a downwardly revised 0.5 percent in January.
