NIFTY CHART

Nifty witnessed renewed selling pressure as profit booking intensified after the recent rally. The index slipped below its 5 DEMA during the session but managed to recover and close above this dynamic support, currently placed near 25220. However, the close below the previous session's low of 25267 and the rejection from the 25475 resistance zone signal a deterioration in near-term price momentum. The daily RSI has also registered a negative crossover in the overbought zone, indicating the possibility of further weakness and consolidation. Market breadth also weakened, with 13 of 16 major sectors ending lower, while the Nifty Midcap 100 declined 1.22%, highlighting broader profit-booking beyond frontline indices. This suggests that the recent rally is facing increasing resistance and buying participation is becoming selective. The immediate support is placed at 25150 level. A decisive closing break below 25150 could accelerate selling pressure and drag the index towards 24950 during the day. Its 20 DEMA near 24475 emerging as the next major support. On the upside, a sustained recovery above 25475 would be required to revive bullish momentum. The near-term bias has turned cautious. Traders should avoid aggressive long positions and use rebounds towards resistance to reassess exposure. A close below 25150 would strengthen the case for further downside towards 24950. Investors may continue to hold fundamentally strong positions while maintaining appropriate risk controls.
